

Integrate the Jira with this existing codebase

Activity: Integrate the AI Agent with Jira by adding a "Connect Jira" feature that allows users to establish a connection using their Jira Base URL, Email ID, and Jira API Token. Once the connection is successfully established, retrieve and populate the available Jira user stories within the application. Ensure the implementation follows the existing project architecture, UI design, and coding standards while maintaining compatibility with the current functionality.

1. Implement the UI Changes
2. Then Implement the Connectivity

The screenshot shows a web browser window with the address bar displaying 'localhost:5173'. The page title is 'User Story to Tests'. At the top, there is a green badge that says 'AI-Powered Test Generation'. Below this, the main heading 'User Story to Tests' is displayed in a large, bold, green font. Underneath the heading, a subtitle reads 'Turn user stories into comprehensive, structured test cases in seconds.'.

The interface features three input fields for Jira authentication: 'Jira Base URL' (containing 'https://muthukumararaja.atlassian.net'), 'Jira Email' (containing 'muthu040189@gmail.com'), and 'Jira API Key' (a masked field). Below these fields are two green buttons: 'Connect Jira' and 'Fetch User Stories'.

On the left side, there is a 'Story Details' section with a 'Reset' button. It contains three text input fields: 'Story Title *' (placeholder: 'Enter the user story title...'), 'Summary *' (placeholder: 'Briefly summarize the user story...'), and 'Description' (placeholder: 'Additional description here...').

On the right side, there is a large green box with a test tube icon. Inside this box, the text reads: 'Your test cases will appear here'. Below this, a smaller text says: 'Fill in the story details on the left and hit Generate. We'll craft positive, negative, edge, and more test cases for you.'
